

rev::Object

rev::Serializable

rev::AnimationController

```
classDiagram
    rev::AnimationController --> rev::Object
    rev::AnimationController --> rev::Serializable
```

The diagram illustrates a class hierarchy where `rev::AnimationController` inherits from both `rev::Object` and `rev::Serializable`. The inheritance is represented by solid lines with hollow triangular arrowheads pointing from the child class (`rev::AnimationController`) to the parent classes (`rev::Object` and `rev::Serializable`).
